I am sending this e-mail in support of satellite radio, in particular XM satellite radio's broadcasting of traffic and weather for some cities. In the spirit of a free market, the NAB should not be running to the government to stop their competition from trying to increase their listener base. They should instead find new ways to keep poeple tuned into their programs. I respectfully request you reject the NAB's petition 04-160. I want the ability to choose who would give me what entertainment and information I want. Thank you.
